ECC Collection | Dining Table

The ECC dining table extends the collection's sculptural language to a larger scale, translating its distinctive geometry into pieces designed for gathering and conversation. Cast from over 90 percent recycled material, each table features ECC's signature half-inch wall thickness, combining strength with a refined, lightweight profile. Adding one or two base modules expands seating from six to as many as 14.

A standout feature of the ECC collection is the incorporation of domestic hardwood and natural stone, offering the flexibility to select from three premium materials for each component. Domestic hardwood is suited for indoor environments, while ECC and natural stone can be specified for both indoor and outdoor applications.
